ENERGY POLICY

INTRACOM DEFENSE S.A.

ENERGY POLICY

INTRACOM DEFENSE S.A. is active in the Design, Development, Production, Procurement, Installation, Commissioning and Technical Support of defense electronics, optoelectronics, telecommunications and security systems, telematics, IT and information security technologies, unmanned systems, hybrid energy systems and providing test center technical services and verification center.

IDE is committed to improving its energy performance and through its Energy Policy for:

- Implementation, maintenance and continuous improvement of energy performance and of the Energy Management System (the "System") according to ISO 50001:2018 standard
- Compliance with relevant legislation and other requirements related to energy efficiency, energy use and consumption
- Providing all the required information and resources for the operation of the System and the achievement of energy goals and objectives
- Support planning activities that take into account the improvement of energy efficiency
- Supply of energy efficient products and services, which positively affect energy efficiency
- Ensuring cooperation with each interested party on energy management issues
- Establishment and periodic review of energy goals and objectives, compatible with the company's strategic direction and energy policy
- Ensuring that the objectives of the System are checked for their achievement and implementation of measures to achieve them in case of failures
- Measurement of the Energy Management System performance using appropriate indicators
- Ensuring continuous training of those involved in Energy Management issues, by providing relevant incentives
- Allocation of required responsibilities and powers to sufficient and competent personnel for the implementation of the System

This Policy is communicated throughout the company, is available to any interested party and is reviewed at least annually.

Georgios Troullinos

Chairman of the B.o.D. & CEO
